

PKV-50

PNEUMATIC CONTROLLED ON/OFF VALVE

GENERAL FEATURES

Pneumatic valve works by moving single acting piston with air controlled actuator. Normally closed position. When the air moves to actuator, the piston moves upwards and the valve is opened. When the air is cut off, the piston is pushed through the spring and the valve is brought to the closed position. It is Y type valve as shown.

Applications:

Textile printing and painting
 Drug and medical equipment
 Food Facilities
 Organic and inorganic chemical industry
 Water / sewage discharge
 Paper factories
 Iron and steel factories

Fluids:

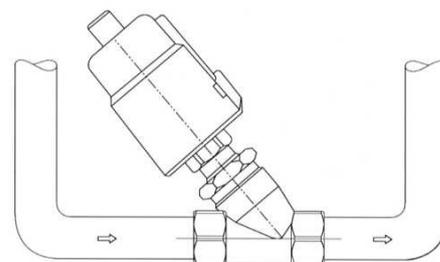

- Water
- Hot water
- Steam
- LPG, pressured gasses
- Gases such as oxygen, hydrogen and nitrogen
- Various chemical fluids

Installation:

Correct selection of installation should be done according to appropriate conditions. The arrow mark on the body must be in the direction of flow. It can be mounted in every direction. But in order to understand the open / closed position, it is beneficial that the drive head is in the place to be seen.

Advantages:

- Easy to use
- Easy installation
- Low energy consumption
- Long working life
- Reliability
- High Sealing
- Flow Control

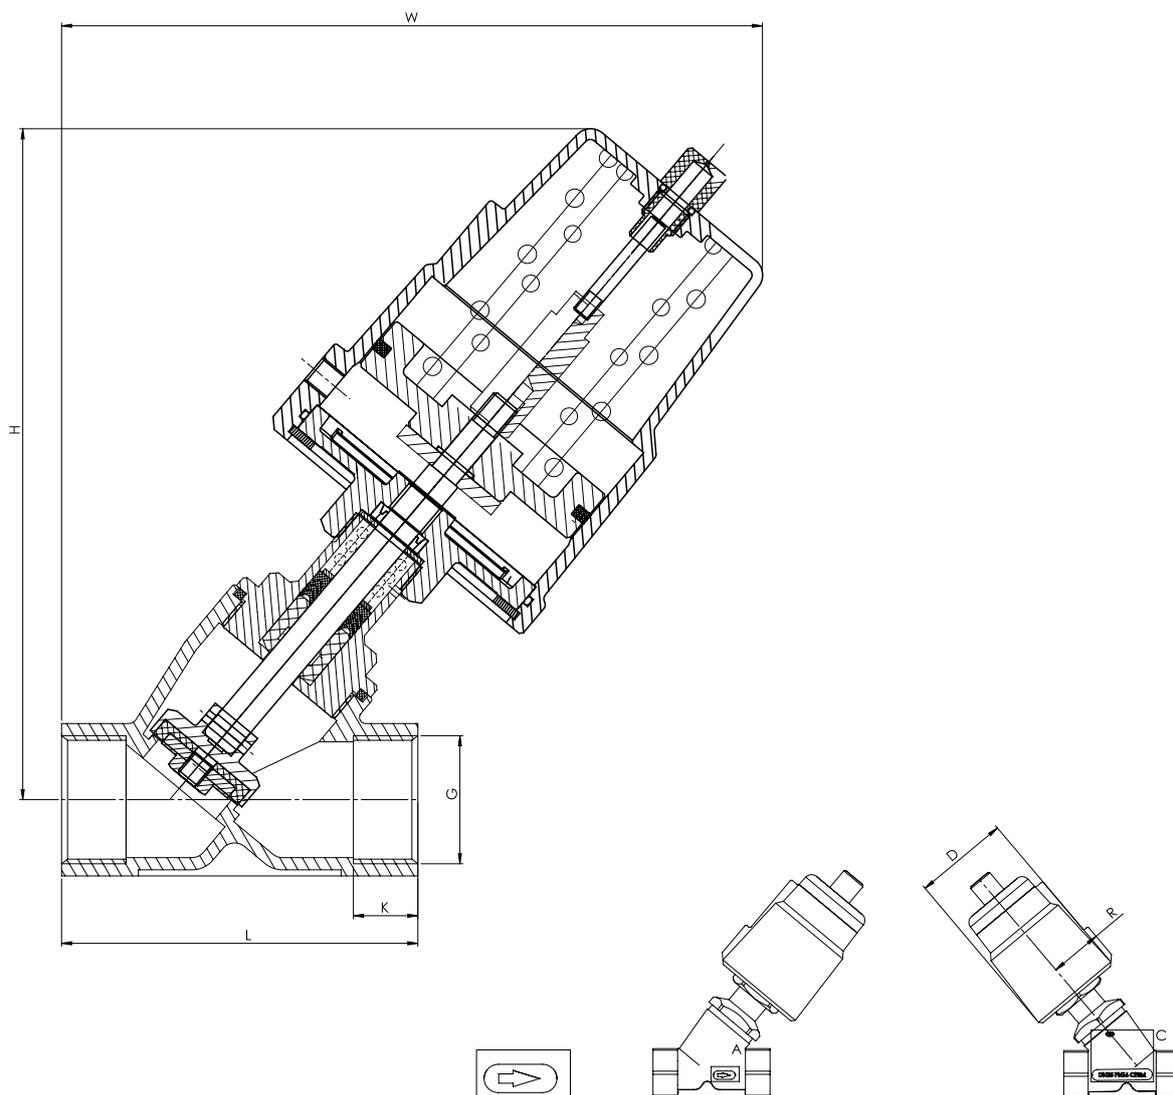

Flow Direction

Diameter	
DN (mm)	inch
15-50	1/2" - 2"

Technical Specifications	
Body	AISI 316 Stainless Steel
Connection	Threaded
Gasket	PTFE
Max. Working Pressure	16 bar
Max. Working Temperature	180°C
Air Supply Pressure Range	3-8 bar
